

When replacing an LED board in the M2-4 fixtures (including M2 wallwashers) you will need either a board to suit an old design body or a new design body. Please refer to the below pictures and descriptions for when you are specifying a replacement board with the factory.

## OLD DESIGN

An old design body requires a board with longer pins. To determine whether you have an old body there are two 'rings' above the conduit wiper seal.

## NEW DESIGN

A new design body requires a board with shorter pins. To determine whether you have a new body there are three 'rings' above the conduit wiper seal.
